YOEN ZHANG

SKILLS

Languages: Python, Java, PHP, mySQL, HTML/CSS, JavaScript, jQuery, Racket, C/C++
Tools: Git, Adobe Suite, Microsoft Suite, TKinter, Kivy, Selenium, BeautifulSoup4, NodeJS, AWS, CI/CD Pipelining, Docker, Bootstrap, Pandas, Numpy
Frameworks: React, MongoDB, Vue.js, Laravel, Express.js, OpenCV

EXPERIENCE

Mozilla – Front End Developer   Sept 2022 – Dec 2022, May 2023 – Aug 2023
- Curated and managed experiments targeting browser users internationally, ranging from 10,000 to over 1,000,000 enrollments
- Developed in-house tools using React to track, log, and increase SCRUM output and load management, improved team output by over 200%
- Worked alongside team managers to tackle over 50 immediate bug fixes, new feature implementations and platform updates

Mobials Inc – Full Stack/Backend Developer   Jan 2022 – April 2022
- Implemented back-end functions, connecting applications and databases using PHP, alongside building the SDK for the front end to meet consumer needs
- Managed user data and added function specific values for over 1000 concurrent customers
- Worked closely with customers to fix ongoing bugs, tailor updates and changes, as well as create extensive testing to ensure product longevity

Goodfood Market Corp - Full Stack Developer   April 2021 – Aug 2021
- Developed both front and back-end functionality using Laravel and Vue.js to anonymize data for past customers in compliance with legal standards
- Migrated mass data for prices, user plans, and subscriptions for over 10,000 users nationwide to match business models and plans using MySQL queries
- Seeded and created hundreds of values alongside backend functionality for our loyalty team to log thousands of records for quarterly reporting

PROJECTS

StatCheck 🏆

- Designed an iOS application to check NBA statistics of players ranging from 1946-present
- Obtains and updates NBA statistics through the balldontlie.io API and displays the entire application through UIKit native to Swift

FinanceApp 🏆

- Developed a finance tracker to log, store, and help manage daily user transactions for day-to-day purchases
- Uses python frameworks such as Kivy for front end design, pandas for data visualization and Google Sheets API alongside Google OAuth 2.0 for back-end data management
- Receipt and text recognition was created from a script using OpenCV and data recognition models

SupremeBot 🏆

- Designed a client friendly retail shopping bot with a user-interface through TKinter with backend operations done through both BeautifulSoup4 and Selenium
- Communicates transactions through user input and local storage to ensure maximum security
